# Introduction

The Victorian Government has developed audio resources in multiple languages in collaboration with the National Ethnic and Multicultural Broadcasters' Council (NEMBC).

If you work closely with culturally and linguistically diverse communities or are a community leader, it can assist you in sharing information related to the COVID-19 pandemic.

Following COVID-19 regulations is the best way to slow the spread of coronavirus, and keep protecting our businesses, communities and each other.

# Multilingual News Service

A regular news service with key information about COVID-19 in Victoria.  
Regularly broadcast across community radio stations across Victoria.

Updated regularly and available online at <https://soundcloud.com/user-760283919/sets/nembc-multilingual-new-service>

# COVID-19 Variants

- All viruses can change over time, including coronavirus (or COVID-19). When a virus spreads through a community, it makes more copies of itself. The virus can change a little bit as it copies itself. These changes are called mutations.
- Even if the virus changes, COVID-19 vaccines still help your body recognise and fight the virus. People who are up to date with their COVID-19 vaccine doses have stronger protection against the Omicron variant and will have milder symptoms if they do become infected.
- Vaccination, testing and being COVIDSafe all help to reduce the spread of all variants of COVID-19.
- Available online at: <https://soundcloud.com/user-760283919/sets/covid-19-variants-explainer-vic>

# Third Dose

- Any one aged 16 and over who has had two doses of a COVID-19 vaccine three or more months ago can now get their third dose.
- A third dose helps to strengthen your immune system and improve your long-term protection against serious illness from all COVID-19 variants.  
You can get your third dose if it has been three months or more since your second dose of vaccine.
- You can get a COVID-19 third dose from a GP, pharmacy or state vaccination centre.

Available online at: <https://soundcloud.com/user-760283919/sets/covid-19-third-dose-explainer-vic>

# Rapid Antigen Tests

Rapid antigen tests are tests you can do yourself at home to check if you have COVID-19.

If you test positive on a rapid antigen test you are a probable case, this means you are very likely to have COVID-19.

You must isolate immediately for 7 days and tell people you have been in contact with recently.

If you test positive on a rapid antigen test you must tell the Department of Health.

Available online at: <https://soundcloud.com/user-760283919/sets/rapid-antigen-test-explainer>

# Vaccinations for 5-11 year olds

Children aged 5 to 11 can now get vaccinated against Covid-19.

By vaccinating your children, you can help to:

- Reduce the spread of COVID-19
- Protect them from getting sick from COVID-19
- Keep schools open, so children can have more face-to-face learning and playtime with their friends.

Available online at: <https://soundcloud.com/user-760283919/sets/vaccinations-for-5-11-year-olds>

# How to get your proof of COVID-19 vaccination

You will need to show proof of vaccination in most places in Victoria.

You can add your digital certificate to the Service Victoria app using myGov and your Medicare account or your IHI.

You can print a copy of your certificate from myGov to take with you, for your vaccination provider to print out your record of vaccination when you are vaccinated or call Services Australia to request a copy be posted to you.
